List of Hazard-Related Use Scenarios

Mapping of Standard Requirements to Document Sections

IEC 62366-1:2015 Section	Title	Document Section
5.4	Identify and describe Hazard-Related Use Scenarios	1
5.5	Select the Hazard-Related Use Scenarios for Summative Evaluation	1

Summary

The goal of the list of Hazard-Related Use Scenarios is to gather all Use Scenarios which could be associated with a Hazard, e.g., if a user doesn't understand a certain feature of the app (bad design leading to poor usability), then a Hazard could be encountered which could subsequently lead to a Hazardous Situation.

1. Hazard-Related Use Scenarios

Fill out this list with Use Scenarios which could be Hazard-related. A good rule of thumb is to have 3-10 scenarios, based on the risk profile of your software.

Also, note that you should prefer to create a spreadsheet for this table (e.g., in Google Sheets) as putting a table in a document will surely lead to chaos. But then again, there's always a certain level of chaos in regulatory documentation.

ID	User Group	Description	App State / Environment	Tasks	Acceptance Criteria
1	Physician	Assess COVID score	1) App is installed 2) App displays patient result	Understand COVID score and initiate further medical treatment	COVID score is understood correctly
